

TRBB - Box Blox Instructions

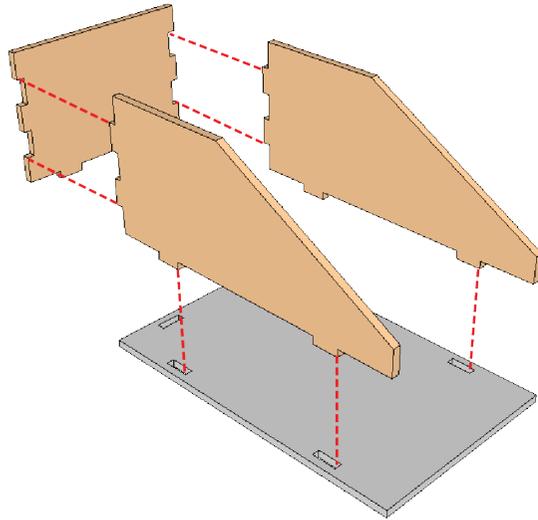

**These instructions and the process of assembly is applicable to all Box Blox boxes:
- Box 1, Box 2, Box 3, Box 4, Box 5 and Box 6**

TRBB - Box Blox Instructions

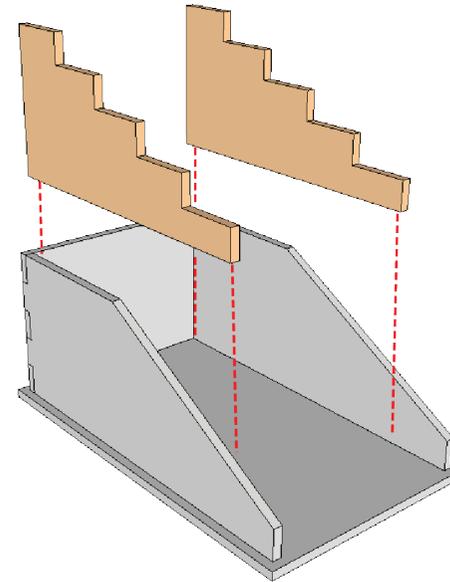

Step 1

You can either insert the two side pieces first and then insert the back piece on an angle and connect it to the sides, or assemble as shown and then slip the assembly into the base

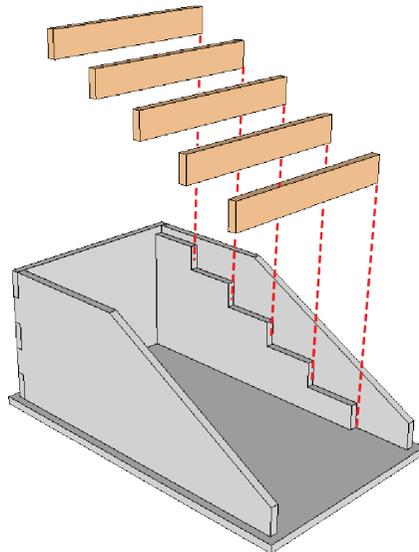

Step 2

The Stringers do not plug into the base.

Be sure to align them on the inside of both sides and all the way to the back

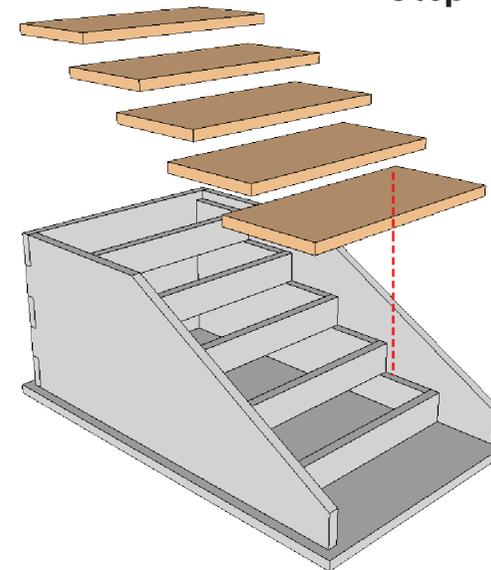

Step 3

I find it easier to start at the bottom and work my way to the top.

Note - you do not need to install the kick-plates, not installing them allows you to fit much larger bases on the stair treads, but leaves an "unsightly" gap in your stairs

Step 4

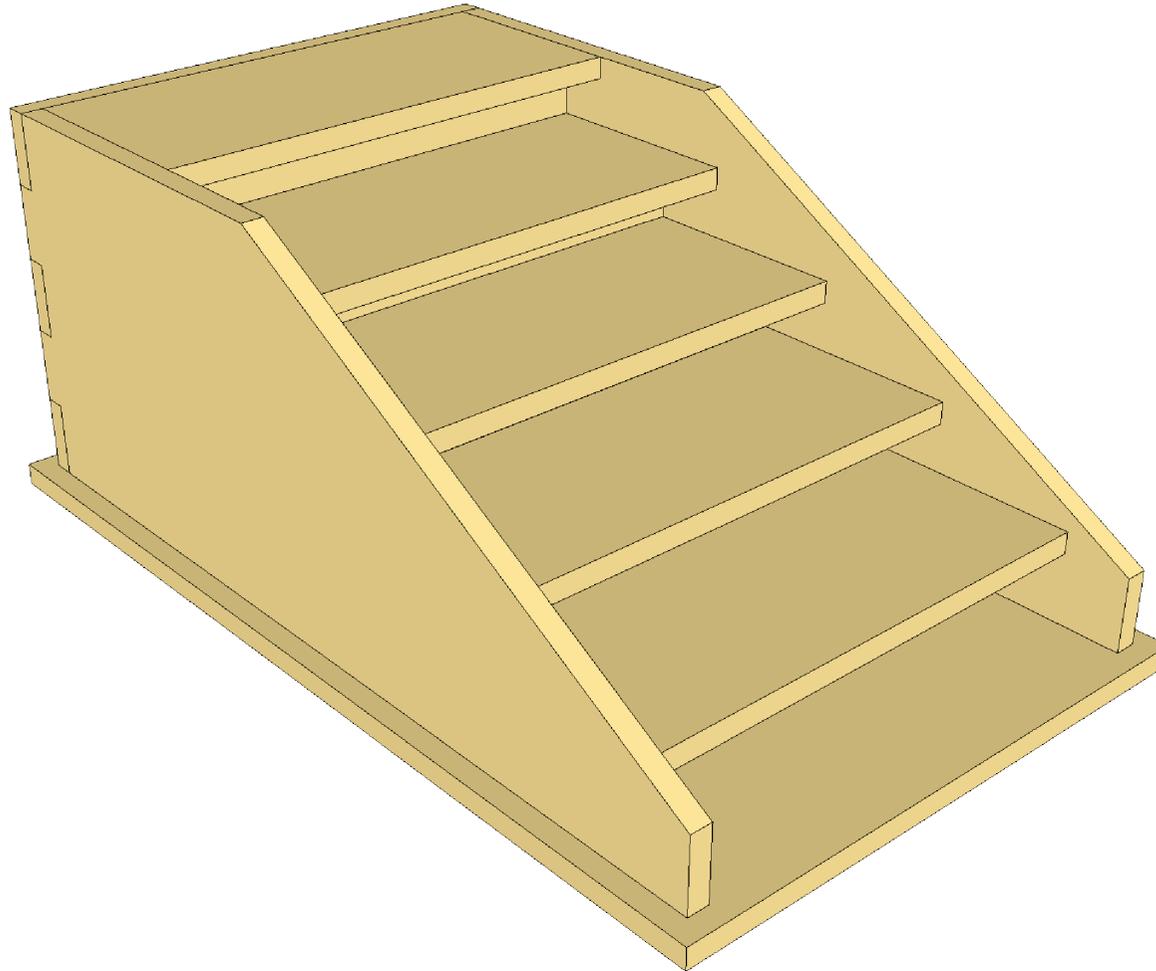

Again, I find it easier to put the bottom stair in place first and work my way up. I like to use super glue at this point as you can easily knock the lower step with your fingers as you're placing the next stair

Stairs Complete!

TRBB - Box Blox Instructions

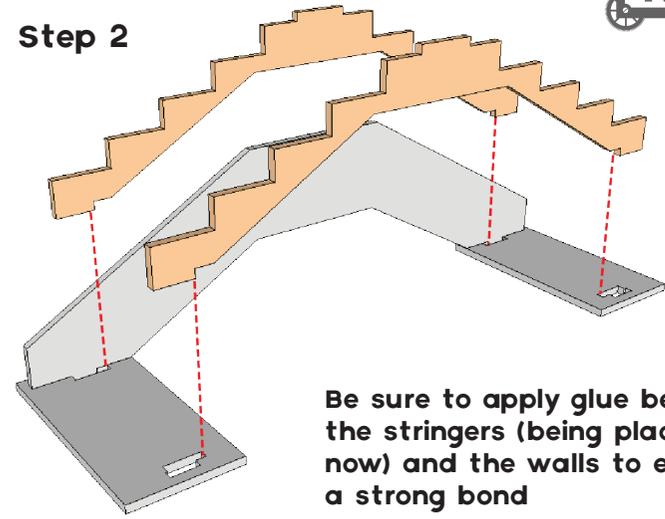

Step 1

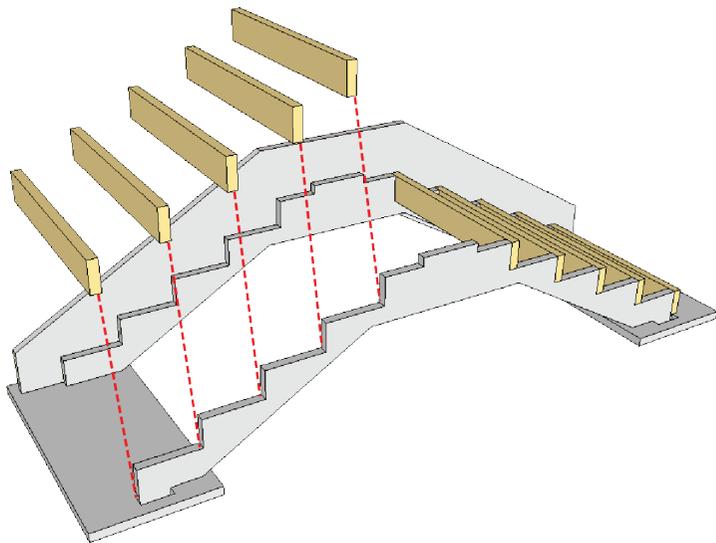

Note - the side wall has been removed in the instructions for clarity, but it should be installed first as per Step 1

Step 2

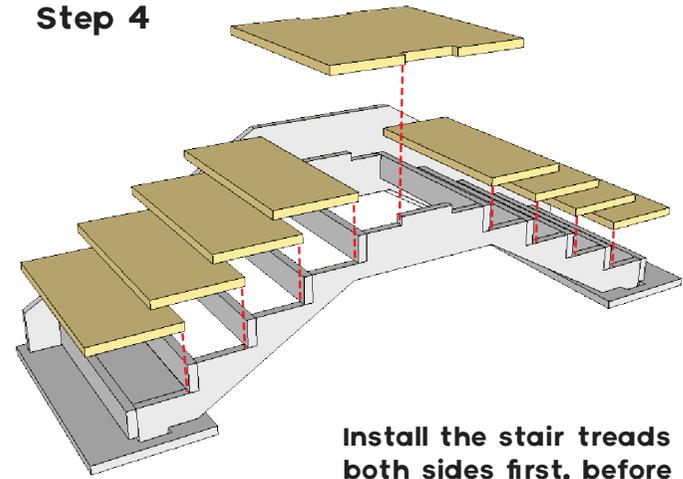

Be sure to apply glue between the stringers (being placed now) and the walls to ensure a strong bond

Step 3

Step 4

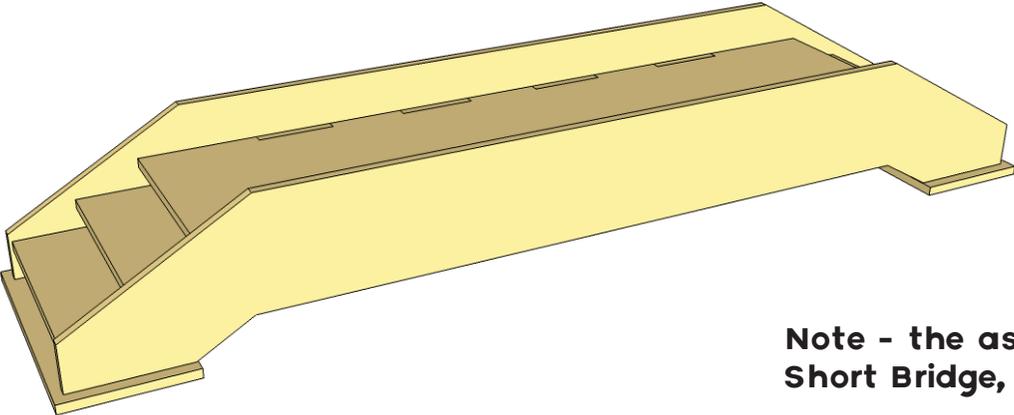

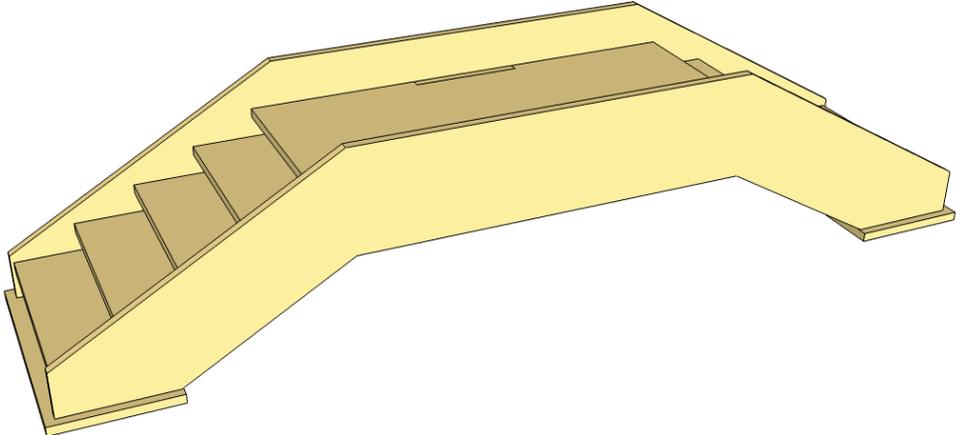

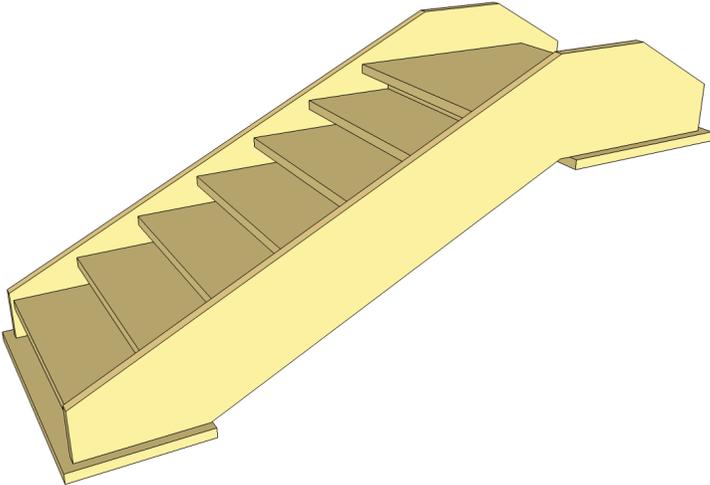

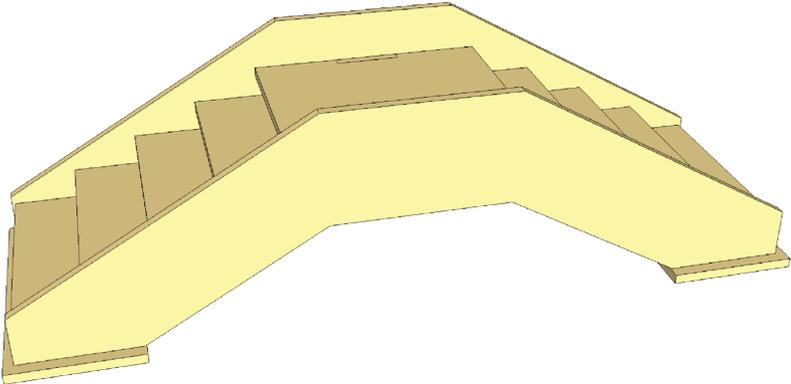

Install the stair treads on both sides first, before placing the final larger plate on top

Note - the assembly process is the same for:
Short Bridge, Long Bridge, Long Walkway and Escalator
