

## NA'SAIN GATEHOUSE INSTRUCTIONS

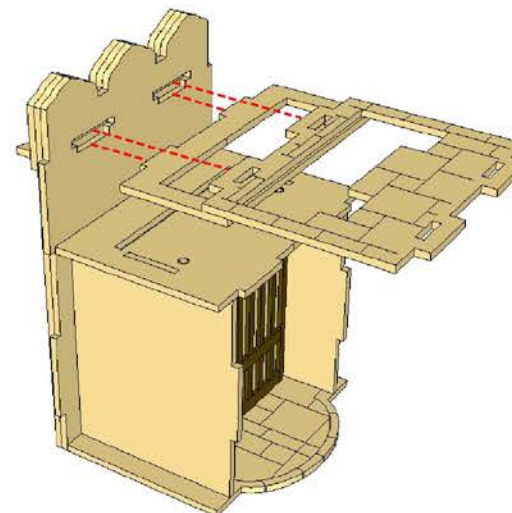

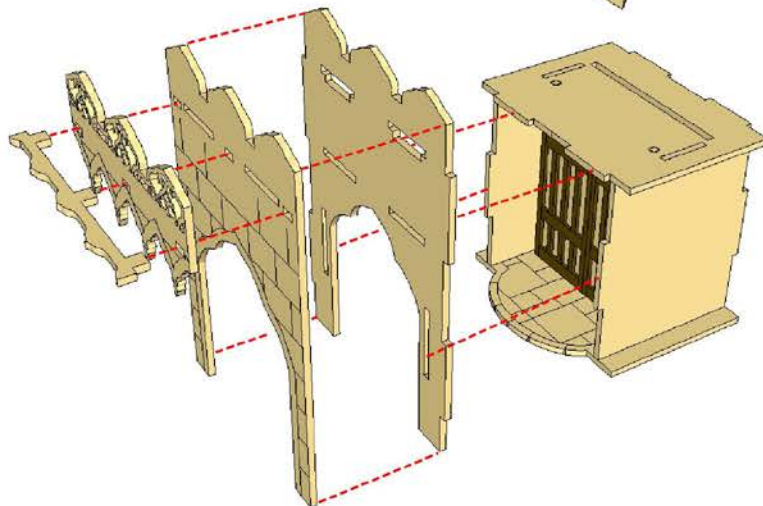

DO NOT glue the tabs with the green lines. The doors are designed to swing open, so gluing them will prevent that :)

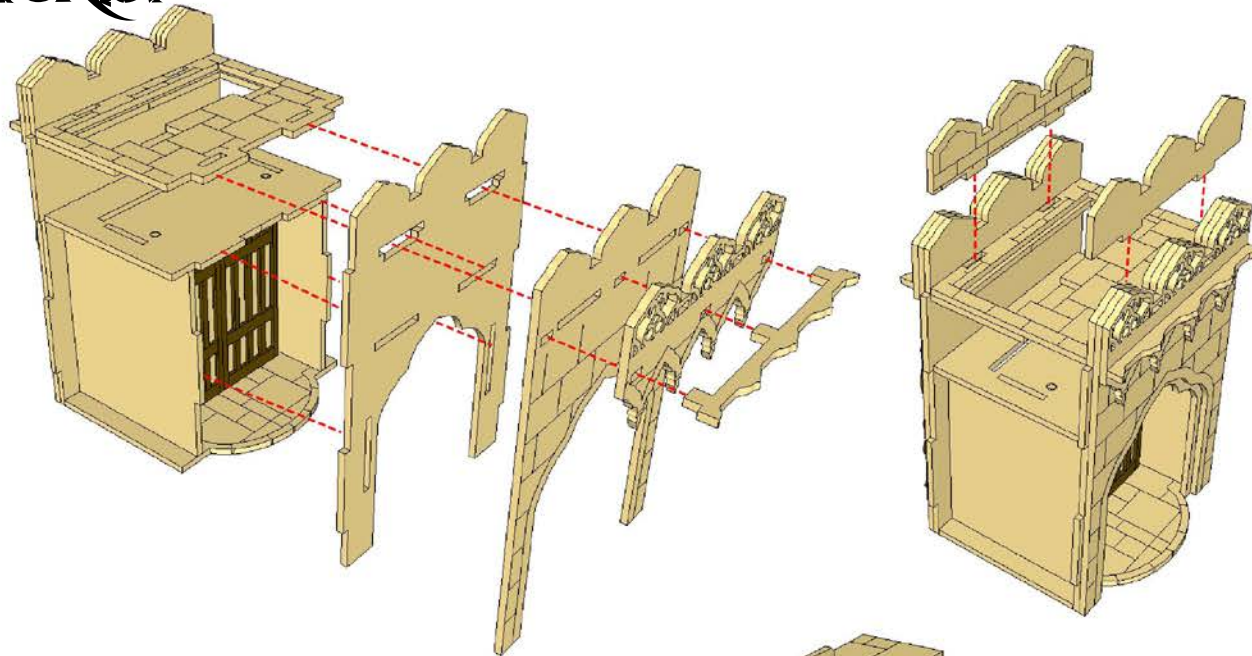

This step can be tricky. Go slowly and make sure to set it aside to dry before moving on to the next step. Large rubber bands can help in this step

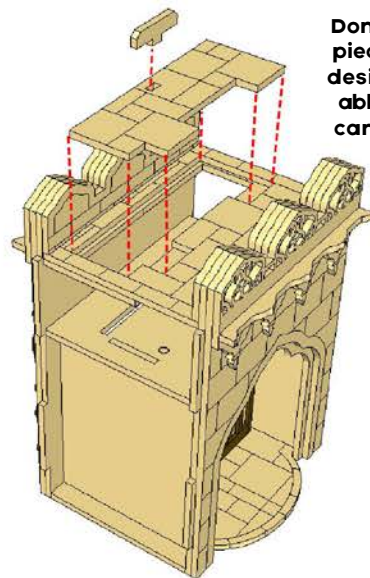

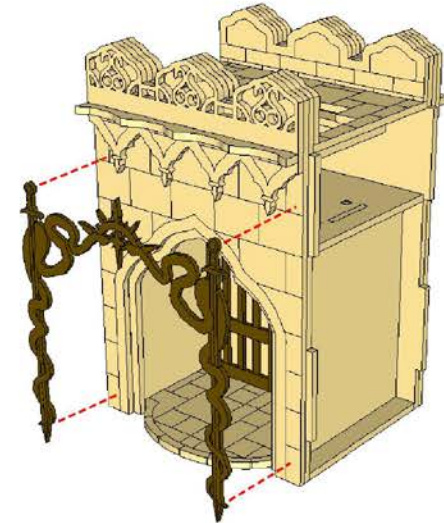

Be careful when gluing the struts to the doors. Be sparing and neat with your glue so you don't accidentally prevent the doors from opening

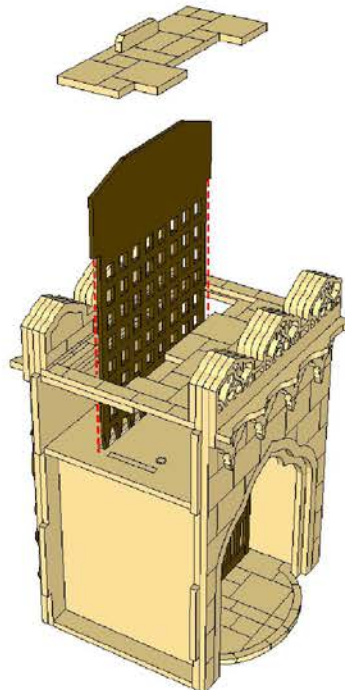

The decorative Snake arch is optional if you want a more generic looking gatehouse

Don't glue the cut-out piece to the wall. It is designed to be removable so the Portcullis can be slipped in and out

The doors should swing open and closed with relative ease
